JavaScript is known to minimize the server validation for the data and boost up the performance of the website in terms of loading speed and request-response ratio. With the various frameworks and libraries like Angular, React and Vue, it's easy to develop highly complex and scalable web application using it and with the high-end security features on the backend using Node JS and various DB providers to manage a large amount of data.

If we talk about Vue.JS, the initial release was launched in February 2014 but its stable version was released on March 2018. However, even before it's first stable release it had already grabbed the attention of developers and got the popularity in the market due to the benefits like flexibility, simple integration methods and two-way communication.
